                                                                                                                 page, and an iso-electric point of about 5. The amylase has optimum activity at about 55 degrees C and pH 9.5, and can be used in the production of improved detergents, e.g. laundry and hard surface cleaning detergent compositions. It is also useful in the production of sweeteners and ethanol from starch and also in the conventional starch-converting
                                                                                                                                                                                            This is a Bacillus species alpha-amylase amino acid sequence. The alpha-amylase is derived from a strain of Bacillus. The preferred strain is Bacillus sp. NGIMB 40916. The mature protein sequence and the polynucleotide coding for the mature protein sequence are specifically claimed. The protein has a molecular weight of 55kD, as determined by SD claimed. The protein has a molecular weight of 55kD, as determined by SD claimed.

p0121 offine Or and p0128 optic209 from cbu10, cooler, p0004, p0004, p0004, p0128 libraries, respectively. It has 80.28 sequence identity to speciabolus staphianus sulphate permeaso(di 1907270). This sequence is used as a probe to isolate other plant sulphate.
                                                                                                                              The present ambino acid sequence is the corn sulphate permease, a sulphate assumblation protein. This sequence is from a contia composed of closes cholo.pknu6.2.bi0, ccolo.pknu6.12, ccolo.pknu6.2.b, ccolo.pknu6.2.bi0, ccol
                                                                                                                                                                                                                                                                                              Claim 6; Page 89 41; Pypp: English
                                                                                                                                                                                                                                                                                                                                                                 homologous proteins, in producing transpense plants

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         RESULT 8
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         detection and diagnosis of S. pneumoniae. The protein sequences are also useful for screening an agent capable of anlagonising, inhibiting or interlering with the function or expression of the proteins in which the agent is useful for treatment or prophylaxis of S. pneumoniae infection and meningitis. A05591 to A05614 represent primers used in the exemplification of the present invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Y81501 to Y81679 represent specifically claimed protein sequences isolated from Streptococcus pneumoniae. A05407 to A05590 represent specifically claimed nucleotide sequences isolated from S. pneumoniae. The sequences have antibacterial and antiinflammatory properties. The protein sequences, and fragments of them, are useful as immunogens and/or antigens. The nucleotide sequences can be useful for the diagnostic assays. The proteins and nucleotides can be useful for the

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     antibodies in standard immunoassays, especially for diagnosing or monitoring infections. Antibodies which bind the protein are used to detect corresponding antiquens, to purify the protein and for passive immunisation (optionally coupled to a toxin). Vaccines are administered, e.g. by injection, orally or through the skin, typically at 0.01-1000 coupled to a toxin or the skin of the skin
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           are used to detect Streptococcus infection (by usual hybridisation or amplification methods), also for isolating Streptococcus genes or their allelic variants. The protein can be used similarly to detect specific
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             can be useful in vaccines for inducing protective antibodies against Streptococcus pneumoniae, for treatment or prevention of intection e.g. pneumonia, otilis media or meningitis. Probes based on the public acid
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Nucleic acid encoding antigenic peptide(s) from Streptococcus pneumoniae - or their epitope-containing fragments, useful in protective or therapeutic vaccines, and for diagnosis
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    The present sequence represents a protein from Streptococcus preumoniae The nucleic acid sequence encoding the Streptococcus preumoniae protein
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Claim 11; Page 65; 118pp; English

Bek primers (see T91088-93) are provided for use in a claimed method for detecting these mutations. Compared with known enzymatic methods, smaller samples are needed, DNA is stable during transport and storage, and the test is more

RAME and PCR amplification were used to obtain the complete rat alpha-d sequence given in 091715. Rat alpha-d I domain/human

A monoclonal antibody that is specific for ratelpha 4 subunit, and which is secreted by hybridoma 199M (AICC HB 12058), is claimed. It may be used to modulate alpha decivity, interlers with human alpha deand treat or prevent diseases such as type I diabetes, atherosclerosis, multiple sclerosis, asthma, psoriasis, lung inflammation, acute respiratory distress syndrome
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   cDNA library. Alpha d is involved in cell migration, phagocytosis and cell-cell interaction. Recombinant alpha d polypeptides can be expressed in transformed host cells for use in assays for

                                                                                                                                                                                                                                                                                  The present sequence represents rat alpha d. The present invention describes: (1) an antibody that specifically binds alpha A which is a beta 2 integrin alpha-subunit polypeptide; (2) a monoclonal antibody as in (1); (4) an anti-lidiotype antibody specific for the monoclonal antibody of (2). (4) a hybridoma cell line producing the monoclonal antibody of (2). Antibodies specific for alpha d can be used in immunohistochemical analysis to localise alpha d to subcellular comportiments or individual cells within tissues. Substances that modulate alpha d binding (which may include antibodies) can be used to treat diabotes, atherosclerosis, multiple selerosis, asthma, pseriasis, lung

ligation mixture by chemical method. The library was constructed by xiaobong Wang."

a 160 c 171 q 136 t

size selected by Gibco's Size Fractionation Column. The cDNAs were closed into Sall/NotI site of pSPokH plasmid vector. The DHIOR E. coli hast was transformed with the

3.42iq of total RNA. The double stranded cDNAs were treated with 14 DNA polymerase and partited by ethanol precipitation. The cDNAs were lighted to Lone linker LL-Sal4 (include Sal4 sequence). The cDNAs were purified by phenol/chloroform and separated from tree linkers by centricon 100. Then, cDNAs were amplified by long range high fidelity PCR using Takara's Ex Taq polymerase. Then, the cDNAs were purified by phenol/chloroform and by Centricon 100. The cDNAs were didested with Sal4 and Not enzymes. Then, the cDNAs were

/note-"Vector: psporI (Gibco/BRL Life Technology):
Site_1: Sall: Site_2: Not! Ford RNAs were extracted from
Amosomephros. The double-stranded clNA was synthesized
by Gibco's kit with an olino(dT) primer [not!
primer-adapter from GibcoBRL]
